Bone Morselizer Bone Morselizer
786-1519 Bone morselizer

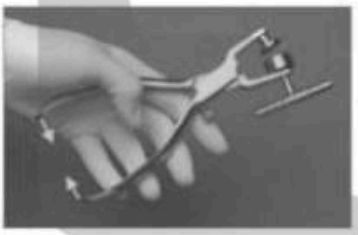

BONE MORSELIZER
The Bone Morselizer is a hand instrument which helps in the crushing of bone material. Follow these steps to prepare properly crushed bone:

1. Adjust the spacing screw (located at the hinge of the handles) to the desired spacing requirements between knurled surfaces.

2. Place the bone material into the bone well.

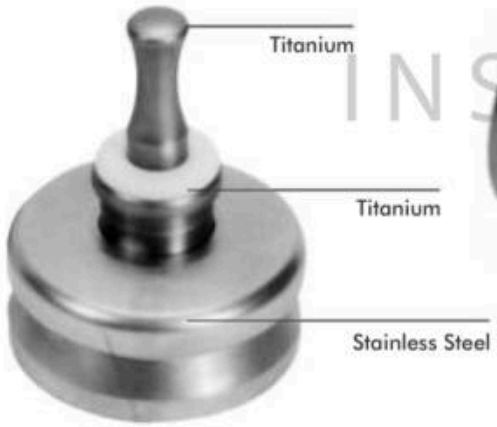

3. Compress handles together in order to create pressure on the bone material.

4. Turn the bone morselizer clockwise as the handles are squeezed. Always maintain a slight space between the two knurled surfaces, by using the spacing screw.

5. To remove bone, press the T-handle and bone will express from the bone well.
